(54) DRUM TYPE WASHING MACHINE

(57)Abstract:

PROBLEM TO BE SOLVED: To surely dissolve unbalance around the rotary shaft of a drum due to the localization of laundry. SOLUTION: A first water storage tank 21 is provided inside a baffle 9 and a second water storage tank 23 is provided on the back surface of the drum 5 in the middle of the first water storage tank 21 adjacent around a main shaft 7. Water supply pipes 25 are radially extended from the main shaft 7 to the respective water storage tanks 21 and 23, and water supplied from the outside to a water supply pipe connection port 15 is selectively supplied through a water injection mechanism 27 provided with a water injection valve 27. At the time of centrifugal dehydration, the water storage tank to inject the water is selected correspondingly to the position of an eccentric load due to the localization of the laundry, the water injection valve 27 is opened, the water is put into the

water storage tank and the unbalance of the entire drum 5 is dissolved. Also, since the water put into the water storage tanks 21 and 23 is discharged from water discharge holes 22 and 24 accompanying the progress of dehydration and weight is gradually reduced, the change of the eccentric load accompanying the weight reduction of the laundry is coped with as well.

(54) 【発明の名称】 ドラム式洗濯機

(57)【要約】

【課題】 洗煙物の偏在によるドラムの回転軸層りのアンバランスを確実に解消する。

【解決手段】 バッフル9の内部に第1貯水槽21を設けるとともに、主軸7の周りで隣接する第1貯水槽21の中間に、第2貯水槽23をドラム5の背面に設ける。各貯水槽21、23には主軸7から放射状に給水管25を延伸させ、給水管接続回15に外部から供給された水を、注水バルブ27を含む注水機構27を経て選択的に送給する。遠心脱水時には、洗濯物の偏在に起因する偏心荷重の位置に応じて注水すべき貯水槽を選定し、注水バルブ27を開放してその貯水槽に水を入れてドラム5全体のアンバランスを解消する。また、貯水槽21、23に入った水は脱水の経過に伴い、排水孔22、24から抜けて重置が次第に減少するため、洗濯物の重量減少に伴う偏心荷重の変化にも対応できる。
